Smart Crypto Management

ALGORITHMIC TRADING SOFTWARE

THE SMART WAY

SMART CRYPTO MANAGEMENT

LearnTradeEvolve offers a fully automated management solution to safely trade an adaptive crypto index. A comprehensive risk management system monitors all processes and independently carries out decisions in the interests of the customers.

Developing the edge over the competition

LEARNTRADEEVOLVE VISION

LearnTradeEvolve consists of a team of experienced crypto traders and engineers who have set themselves the goal of developing the best strategic management tool for their customers to get through the volatile crypto market safely and profitably.

SMART
INDEX

LearnTradeEvolve is trading the most trusted crypto assets simultaneously when they are trending to reduce market risk. There are several advantages of utilizing the index trading strategy. For one, empirical research finds index strategy tends to outperform active management over a long timeframe. Taking a hands-off approach to trading eliminates many of the biases and uncertainties that arise in a single asset-picking strategy. In addition, monitoring many assets allows you to find more trading opportunities, thereby helping to increase performance.

TRAILING SELL

We increase trading profits by using indicator-based trailing sell to take full advantage of bullish momentum.

INDICATOR FILTERED TRAILING PROFIT

TAKE PROFIT LIMIT

ADDITIONAL PROFIT

Indicator based Sell

We dont use Take Profit or Stop Loss to Exit a Trade

Higher Returns

Single Trade Profits can be >50%

Multitimeframe

We monitor trading conditions in multiple timeframes to increase reliability.

MULTI TIMEFRAME
TREND FILTERING

We use a proprietary trend filter for our intelligent risk management. For example, we currently only allow trades in bullish/positive market phases and close all orders after bearish/negative trend changes. This enables us to determine the current trend with certainty and to close the open orders with only a small delay after trend changes.

POTENTIAL ANALYSIS

MULTITIMEFRAME

We use a self-developed potential indicator to evaluate the current market risk and identify trading opportunities. This takes data from various timeframes and indicators and provides a meaningful interpretation of the market.

ENTRY & EXIT SIGNALS

Real-time analysis of the market for decision making

### MULTITIMEFRAME

Multi-Timeframe Multi-Input Indicator

TREND FILTERING

Only used in combination with higher Timeframe Trend Filtering

BENCHMARKED TRADING

Below you can see the current developments.

Improved Market Analysis

Improving the detection of market changes will improve the overall performance

Adding More Exchanges

In the future, our software should also be usable for other exchanges

Webplatform

In the future, we will offer customers a web platform

Dynamic Coin Whitelisting

Dynamically adding and removing of coins to improve the index

Short Direction Trading

Implementation of Shortings to allow trading in both trend directions

AI Integration

The order and risk management should be supported by an AI

BACKTEST BTC

The results below are based on 100% direct trading of BTC coin. In our software BTC is part of the Index with less then 10% exposure.
